Addenda to Memo of 14 August regarding CARBARO-2:
1954

This is the way [] chose to interpret Lt. Williams's note. The cable of 13 August from MUNI, however, used the actual words of the Lieutenant: "Pulmonary tuberculosis, minimal, obsolete." The significant fact is that comparison of an xray taken in Sweden in March 1950 with one taken by the Munich Army Hospital in late July showed "no change in a minimal fibrotic lesion within the left apex." Lt. Williams also went so far as to say that from what he knew of medical examinations for US immigration, CARBARO-2 would certainly pass any such exam, since the immigration authorities require only one year between xrays showing no change, whereas in this case two years and four months had elapsed.

NAZI WAR CRIMES DISCLOSURE ACT

EXEMPTIONS Section 3(b)
(2)(A) Privacy ☐
(2)(B) Methods/Sources ☒
(2)(C) Foreign Relations ☐

Declassified and Approved for Release
by the Central Intelligence Agency
